

More Power

More Torque

Smoother Driving

Better Fuel Efficiency

Dawes Valve:

All turbo equipped vehicles have their boost pressure set at a specific level as to protect the turbo and from damage as it can only handle a certain amount of boost pressure. Some vehicles can suffer from overboosting which means their boost levels can fluctuate dramatically which can cause damage to the turbo and engine. Fitting a Dawes valve prevents over boosting, on VNT turbos by setting and controlling the upper boost limit, so when the turbo hits the predetermined boost pressure and it holds it at that level.

Dawes valves need to be setup by an experienced fitter/installer; we do not recommend this as a DIY kit.

We provide a Dawes Valve Kits to the following Vehicles:

- Nissan Patrol GU 3.0L ZD30 & CRD (Ute and Wagon)

TaipanXP – Unit 6 2-10 Rudman Pde, Burleigh Heads QLD 4220
