## Engine monitoring gauges

### Digital Pyrometer:

Very high exhaust gas temperatures (EGT's) are a big issue for engines, as they can dramatically shorten the life of a diesel engine. High EGT's can also put vehicles into 'Limp Home'. This can be a serious issue because if the vehicle does go into limp home mode one of two things can happen:

1. Your vehicle either loses partial power
2. Complete loss of power

We recommend a Cruz Pro digital pyrometer over an analogue gauge the digital gauge gives you a faster & more accurate reading. It helps to provide an accurate reading of your vehicle's EGT level while providing 85db alarm when your EGT levels are too high or too low which can be set up at predetermined temperatures. When your EGT's are too high this gives you an indication that you need to take your foot off the pedal.

### Boost Gauge:

Monitoring your vehicle's vital signs is essential for your vehicle's longevity. An area to monitor is boost pressure, which can be monitored using a boost gauge. A boost gauge can indicate any number of issues as listed below:

- Overboosting, eradicate boosting & loss of boost.
- These above issues can lead to poor performance & drivability, turbo damage/failure and engine damage/failure.
